Career Objective

AI Engineer with hands-on experience building production-grade LLM applications, agentic AI systems, RAG pipelines, and data-driven solutions. Seeking to contribute strong skills in Python, Numpy, Pandas, Matplotlib LangChain, LLM orchestration, PostgreSQL, and AI engineering to build scalable, reliable, and impactful intelligent systems.

Professional Experience

Cyces Innovation Labs LLP (SaaS) — Chennai, India
AI Engineer — *June 2025 - June 2026*

Worked on production-grade AI solutions involving **LLM orchestration, agentic AI, RAG pipelines, data analytics, and predictive modeling**, building scalable systems for enterprise data, energy markets, and operational intelligence.

ROA (Realty of America) - Conversational Agent
- Delivered a production-grade AI Data Assistant using **LangChain's SQLDatabase Toolkit**, enabling natural language-to-SQL translation across **50+ isolated enterprise datasets**.
- Automated data ingestion, schema sanitization, and permanent view creation, reducing manual engineering overhead by **80%**; implemented **LangSmith** observability for token monitoring, prompt optimization, and complex agent debugging.

ChiGrids - Energy Market AI Platform
- Architected an enterprise energy market AI using **Django, LangChain, and Gemini 2.5 Flash**, orchestrating dynamic tool-calling for real-time calculations and SSE streaming.
- Engineered **SARIMA-EGARCH** and Quantile Regression forecasting to generate statistically robust day-ahead **P10/P50/P90 pricing bands**, alongside an optimized **PGVector RAG pipeline** with guardrails for regulatory compliance.

WEGoT - AI Insights
- Developed high-performance asynchronous AI Insight Agents using **asyncio** and **Gemini 2.5 Flash** to analyze complex operational and portfolio data and generate actionable CXO-level insights.
- Implemented deterministic structured output using **Pydantic** validators, ensuring reliable JSON responses aligned with strict frontend UI requirements for site-efficiency metrics and anomaly detection.

Skills

Programming Languages and Databases:	**C++, Python, PostgreSQL, Vector Databases**
Technologies & Frameworks:	**LangChain, Langsmith, GCP, Django, Git, GitHub**
Machine Learning:	**NumPy, Pandas, Matplotlib**
Core Concepts:	**LLM Orchestration, Observability, AI Agents, DSA**
Soft Skills:	**Communication, Collaboration, Adaptability**

Education

B.E. Computer Science and Engineering — CGPA: 7.0
Anna University, College of Engineering, Guindy — *Sept 2022 - June 2025*

Diploma in Computer Science and Engineering — Percentage: 99
Panimalar Polytechnic College, Chennai — *2019 - 2022*

Academic Projects

Optimized DL Framework for Lung Disease Diagnosis and Severity Assessment
- Implemented **MultiRes U-Net** for lung disease segmentation, achieving an **IoU score of 0.92** and reducing segmentation error by **30%**.
- Optimized CNN deep features using the **Parrot Optimizer**, reducing training time by **25%** while maintaining high accuracy.
